Fleet Operation Support

Crew Training and Planned Maintenance Systems

The crew training in operation and maintenance of the shipboard equipment and systems are the essential requirements under STCW 2010, other international conventions and national standards.

Albion Marine Solutions team can develop the vessel- and equipment-specific crew training manuals and computer-based training programs. The training program would be tailored to customer-specific needs.

Albion Marine Solutions can also develop a maintenance program for the newly installed equipment.

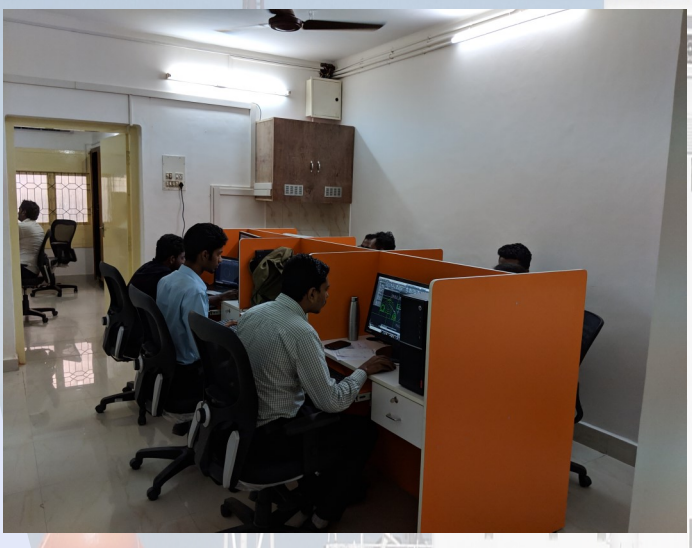
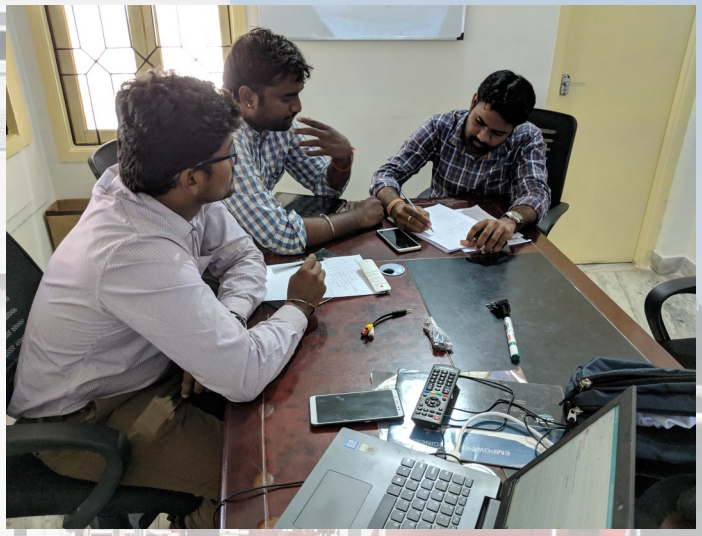
The maintenance program would include a maintenance schedule, OPEX cost projections, a detailed list of spare parts and of installed components, as well as a list of critical spares. The maintenance program would be designed to satisfy Class requirements and would also be customized for the Customer's maintenance standards and policies.





Our team has extensive experience with various models of Planned Maintenance Systems (PMS), including DNV GL, NS5, AMOS, RAST, Neptune, InfoShip, TM Master, GL Shipmanager, Maximo, Bassnet, Star IPS and TeoMaki. We can develop and manage complete PMS and Dry Dock Management system.
